

CLINICAL SKILLS & MANAGEMENT

Clinical Observations

This Clinical Observations course focuses on how to observe both unconscious and conscious patients on a clinical level. Delegates are nurtured to build a crucially important skill set including casual ward observations and more intensive and demanding patient supervisory roles.

Programme/Course Content

- Why make clinical observations?
- Universal precautions
- Patient / Service user identification and consent
- Physical and Physiological observations
- Vital signs – temperature, pulse, respiration, blood pressure, oxygen saturation etc.
- Specimens – urinalysis, blood glucose monitoring
- Clinical Observation indicators and Early Warning Scores
- The unconscious patient / service user
- Records and defensible documentation
- Actions to take for out of range clinical observations
- Summary and evaluation

Aimed at: Healthcare workers in direct contact with patients

Accreditation: Compliant with the National Occupation Standards for Health and Social Care Workers and satisfies the requirements of the Care Quality Commission
