

ECG READING AND BASIC INTERPRETATION

ECG Reading and Basic Interpretation

This professional training course provides healthcare professionals with a theoretical and practical basis that allows them to read and begin to interpret electrocardiogram monitors and traces. Nurses, doctors and other health professionals who are required to carry out ECGs as part of their day-to-day responsibilities will benefit from this exceptional, professional training programme.

Programme/Course Content

- Anatomy and physiology of the heart and conduction system
- Lead placement for recording a 12 lead ECG
- The normal 12 lead ECG and cardiac axis
- Troubleshooting
- Atrial abnormalities
- Ventricular abnormalities
- Disorders of conduction
- Ischaemia Infarction and the ECG
- Rhythm recognition
- Practical session
- The 'normal' ECG
- Clinical case studies
- Acute Myocardial Infarction

Aimed at: Healthcare professionals who are required to carry out and interpret the results of electrocardiogram assessments.

Accreditation: Attending healthcare professionals will be provided with a ECG training course workbook to complete which aims to demonstrate competent practice.
